FOR IMMEDIATE RELEASE

Bayou Rouge Mitigation Area to Offset Impacts from Denbury Onshore's Green Pipeline

Baton Rouge, Louisiana, December 9, 2008: Resource Environmental Solutions LLC (RES) has been selected by Denbury Onshore LLC, a Denbury Resources Inc (NYSE:DNR) company, to develop a turnkey project-specific compensatory mitigation solution for a CO₂ pipeline from Donaldsonville, Louisiana to the Louisiana state line. Called the Green Pipeline, RES will mitigate wetlands affected by construction of right-of-way to facilitate the installation of a 210-mile section of the 24-inch CO₂ pipeline originating near Donaldsonville, LA and traversing Iberville, West Baton Rouge, Pointe Coupee, St. Landry, Acadia, Jefferson Davis, Allen and Calcasieu Parishes.

RES identified a suitable site and developed mitigation plans that were accepted for permitting by the U.S. Army Corps of Engineers. Approved mitigation activities associated with the project's wetlands impacts also are beneficial to the health and sustainability of the threatened Louisiana Black Bear. Known as the Bayou Rouge Mitigation Area (BRMA), RES will restore acquired land to a bottomland hardwood forest and bald cypress swamp by restoring surface hydrology, conducting tree and vegetation plantings, and providing effective management throughout the life of the BRMA. In addition to mitigating any wetlands impacts, the restored forests and swamps provide more protected travel corridors for the Black Bear.

From needs assessment through Corps' approval, RES executed the entire approval process in less than 90 days including site selection, coordination with all state and federal agencies, putting up financial assurances, developing and gaining approval of a suitable mitigation plan. Said Denbury's Vice President-Land, Ray Dubuisson, "We are very pleased with our RES relationship and their execution of an accelerated permitting process for the Green Pipeline." Elliott Bouillion, CEO of Resource Environmental Solutions, noted "project-specific mitigation allows our clients to focus on their business rather than devoting large amounts of time and resources dealing with mitigation issues during the permit process."

Resource Environmental Solutions is a wetlands mitigation company specializing in wetland mitigation and bank management. As a mitigation bank, we acquire land, restore original wetland features and protect the land in perpetuity. Our efforts as a mitigation bank are both financially valuable to our investors and environmentally beneficial to surrounding communities.
